#### standard scope

This specification 2 covers grades of nominal wall thickness, stainless steel tubing for services requiring generalcorrosion resistance, with particular emphasis on resistance to

stress corrosion cracking. These steels are susceptible to embrittlement if used for prolonged periods at elevated temperatures.

1.2 The values stated in either inch-pound units or SI units are to be regarded separately as standard. Within the text, the SI units are shown in brackets. The values stated in each

system are not exact equivalents; therefore, each system must be used independently of the other. Combining values from the two systems may result in nonconformance with the specifi-

cation. The inch-pound units shall apply unless the M designation of this specification is specified in the order.
