304 stainless steel is a common material in stainless steel, the density of 7.93g /cm³; Also known in the industry as 18/8 stainless steel, meaning containing more than 18% chromium and more than 8% nickel; High temperature resistance 800°C, has the characteristics of good processing performance, high toughness, widely used in industrial and furniture decoration industry and food and medical industry. But it needs to be noted that food grade 304 stainless steel compared with ordinary 304 stainless steel, its content index is more strict.
