Product Description

DIN EN 1.4307 X5CrNi18-10 Stainless Steel Tube SCH80S Good corrosion resistance

1.4547 has a high molybdenum content, so it has a very high resistance to spot corrosion and crack corrosion resistance. This grade of stainless steel was developed for use in halogenated environments such as seawater. It also has good resistance to uniform corrosion. Especially in halogenated acids. This kind of steel has very good local corrosion resistance, in seawater, aerated, there are gaps, low speed erosion conditions, has good pitting resistance ($PI \geq 40$) and good stress corrosion resistance, is a substitute material for Ni-based alloys and titanium alloys. Secondly, in the performance of high temperature or corrosion resistance, it has more excellent high temperature or corrosion resistance.

APPLICATIONS:

1.4547 Applications: Marine structures in Marine environment, seawater desalination, seawater heat exchange, environmental protection, energy generation, oil refining and chemical and chemical equipment, salt and soy sauce brewing, papermaking industry bleaching equipment.
